Weekly Report Romania

26 June 2014

The Central Bank in the spotlight next week

Macroeconomics: Private lending still negative but recovering (Page 3-5)

The banking statistics data for May showed that private lending annual growth is still in the negative territory (-2.1%YoY) and the most affected is still the corporate sector (-3%YoY) while households loans are close to recovering (-1.2%YoY). If we adjust for the foreign currency effect, we notice that the net loan outflows bottomed in December 2013 and that slowly the market will pick up. According to the May survey operated by NBR, the demand for consumer and mortgage loans increased in Q2 whereas in Q1 it was flat. Demand for loans from companies continues to decline but on the offer side banks were extremely active in Q2, unlike the previous quarter. Mortgage loans have stabilized around 10% YoY, but the RON component exploded. Private deposits rose at 6.6% in May. Based on original currency data, foreign currency and RON denominated deposits annual growth rates are negatively correlated (-0.68). At the moment, the FX deposits are on an uptrend.

FX market: The leu strenghtens (Page 6 - 7)

The leu remains under appreciation spell in the short term. The change in appetite of foreigners for the local bond market plays the biggest role. However, the Central Bank stated several times its cautiousness regarding speculative capital so we can expect it to intervene if the leu threatens to fall outside the much voiced +/- 5% variation band. Considering that the attractiveness of the domestic bond market could change as soon as Q4 2014 and that the proposed fiscal measures threaten the oasis of stability that has been projected so far, the leu could feel depreciation pressures towards the end of the year, when discussions over the 2015 budget and the IMF review will take place.

Fixed income markets: Yield curve shifted down (Page 8 - 9)

The yield curve moved lower again , by up to 14 bps and especially at the long end. What played in this scenario was the new found interest of foreigners who reconsidered the CEE fixed income universe, given the stance of major central banks like the ECB and the Fed which are expected to keep rates lower for longer than previously thought. The Treasury managed to sell bonds with a residual maturity of 8.8 years at 4.5%, 28 bps lower than the similar previous auction held in the end of May. Bid to cover ratio stood at 2.4.

Money markets: Looking forward to reserve ratio cut (Page 10)

Money market rates climbed this week, as the new reserve period started. However, they remain well below the base rate and the excess liquidity appears to persist. The market was expecting a further reduction in the mandatory reserve rate for RON liabilities which is high compared to the region and should be brought lower considering the euro adoption in 2019 (political consensus was achieved). This would help banks of lower scale as well, for which funding costs are still signficant. However, Mediafax news agency cited official sources according to which the market could expect a cut in reserve ratio for foreign currency denominated liabilities which is currently at 18%. Another aspect of the tale was that NBR could consider cutting the base rate in the fall provided inflation fell below 3% YoY. In its May projection, the Central Bank forecasted inflation at 2.9% YoY for September and 3.3% YoY for December. While we do not rule out a cut of mandatory reserves for both the RON and FX liabilities, we do not see another base rate cut coming, as the NBR has preferred to keep the base rate moderately decoupled from the MM rates rather than make too frequent changes, especially if the risk of the next move was upward.

Macroeconomics: Private lending still negative but recovering

	PERIOD	INDICATOR	FACT	CONSENSUS	PRIOR
26 Jun	May	Non -governmental loans (y-o-y, %)	-2.1		-0.8
26 Jun	May	Non -governmental deposits (y-o-y, %)	6.6		7.1
26 Jun	May	M3 aggregate (y-o-y, %)	6.5		6.7
01 Jul	May	ILO unemployment (seasonally adjusted, %)			7.1
02 Jul	May	Retail trade turnover index (y-o-y, %)			4.5
02 Jul	May	Producer Price Index (y-o-y, %)			0.8

The banking statistics data for May showed that private lending annual growth is still in the negative territory (-2.1%YoY) and the most affected is still the corporate sector (-3%YoY) while households loans are close to recovering (-1.2%YoY). If we adjust for the foreign currency effect, we notice that the net loan outflows bottomed in December 2013 and that slowly the market will pick up. According to the May survey operated by NBR, the demand for consumer and mortgage loans increased in Q2 whereas in Q1 it was flat. Demand for loans from companies continues to decline but on the offer side banks were extremely active in Q2, unlike the previous quarter.

The new proposed governmental measure to restructure loans (" Electorata") which have no delay and which applies to banking clients with gross income or pension of up to RON 2200/month will produce an upward bias to loans' dynamics. According to data from the National Institute of statistics, two thirds of total number of employess have on average a gross wage below the 2200 RON treshold (based on economic branches). By comparison, all pensioneers who are banking clients could potentially benefit from the new legislation, with few exceptions (please see the graph and table below). Initially, when the proposed gross wage was RON 2000 only 1.5 mn employees fit the description and they did not include for example sectors like health, education and trade(according to Q1 2014 average gross wage data)

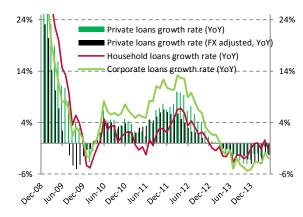

3 mn employees out of 4.4 mn total employees have gross wages below RON 2200/ month (Q1 2014 gross monthly average)

FX markets: The leu strenghtens

The leu remains under appreciation spell in the short term. The change in appetite of foreigners for the local bond market plays the biggest role. However, the Central Bank stated several times its cautiousness regarding speculative capital so we can expect it to intervene if the leu threatens to fall outside the much voiced +/- 5% variation band. Considering that the attractiveness of the domestic bond market could change as soon as Q4 2014 and that the proposed fiscal measures threaten the oasis of stability that been projected so far, the leu could feel depreciation pressures towards the end of the year, when discussions over the 2015 budget and the IMF review will take place.

As we mentioned in previous reports, the decrease in social contributions will cause a 0.7% GDP gap in 2015 which could send the final ESA figure above the 3% threshold. According to the first 5M cash deficit data, the recorded cash deficit stood at 0.2% in GDP but we did not witness a faster pace of fiscal income. Also, current revenues annual dynamics is slowing down (3.7% yoy Jan-May) whereas current expenditures are moving more rapidly (+0.7% YoY). Capital expenditures continue to be sacrificed. Also, on the revenue side, a positive impact was felt from property taxes. which were raised this year by the means of special constructions tax introduced this year. This is paid in two equal tranches, in May and September but the business environment is already voicing concerns, given that the impact is more significant than initially calculated: according to the Budget Minister, total revenues will mount to RON 1.5 bn (0.2% in GDP) compared to RON 0.5 bn expected. All in all, colection does not seem to improve and the severity of the tax cuts will make more noise at the end of the year.

Government securities: Yield curve shifted down

The yield curve moved lower again , by up to 14 bps and especially at the long end. What played in this scenario was the new found interest of foreigners who reconsidered the CEE fixed income universe, given the stance of major central banks like the ECB and the Fed which are expected to keep rates lower for longer than previously thought.

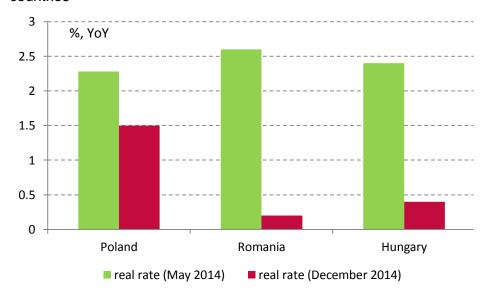

The Treasury managed to sell bonds with a residual maturity of 8.8 years at 4.5%, 28 bps lower than the similar previous auction held in the end of May. Bid to cover ratio stood at 2.4.

MM: Looking forward to reserve ratio cut

Money market rates climbed this week, as the new reserve period started. However, they remain well below the base rate and the excess liquidity appears to persist. The market was expecting a further reduction in the mandatory reserve rate for RON liabilities which is high compared to the region and should be brought lower considering the euro adoption in 2019 (political consensus was achieved). This would help banks of lower scale as well, for which funding costs are still signficant. However, Mediafax news agency cited official sources according to which the market could expect a cut in reserve ratio for foreign currency denominated liabilities which is currently at 18%. Another aspect of the tale was that NBR could consider cutting the base rate in the fall provided inflation fell below 3% YoY. In its May projection, the Central Bank forecasted inflation at 2.9% YoY for September and 3.3% YoY for December. While we do not rule out a cut of mandatory reserves for both the RON and FX liabilities, we do not see another base rate cut coming, as the NBR has preferred to keep the base rate moderately decoupled from the MM rates rather than make too frequent changes, especially if the risk of the next move was upward.

Furthermore there can be no guarantees that any market developments will unfold as forecasted. Opinions and estimates constitute our judgment and are subject to change without notice.

OTP Bank Romania S.A. may have issued reports that are different or inconsistent with the information expressed within this report and is under no obligation to update or keep current the information contained herein.

OTP Bank Romania S.A. may hold a position or act as market maker in the financial instrument of any issuer discussed herein or act as advisor or lender to such issuer. This document is not intended to provide the basis for any evaluation of the financial instruments discussed herein. In particular, information in this document regarding any issue of new financial instruments should be regarded as indicative, preliminary and for illustrative purposes only, and evaluation of any such financial instruments should be made solely on the basis of information contained in the relevant offering circular and pricing supplement when available. OTP Bank Romania S.A. does not act as a fiduciary for or an advisor to any prospective purchaser of the financial instruments discussed herein and is not responsible for determining the legality or suitability of an investment in the financial instruments by any prospective purchaser.

This report is not intended to influence in any way or to be considered a substitute to research and advice centred on the specific investment objectives and constraints of the recipient (including tax concerns) therefore investors should obtain individual financial advice. Before purchasing or selling financial instruments or engaging investment services, please examine the prospectuses, regulations, terms, agreements, notices, fee letters, and any other relevant documents regarding financial instruments or investment services described herein in order to be capable of making a well-advised investment decision. Please refer to your competent adviser for advice on the risks, fees, taxes, potential losses and any other relevant conditions before you make your investment decision regarding financial instruments or investment services described herein. OTP Bank Romania S.A. in compliance with the applicable law, assumes no responsibility, obligation, warranty or guarantee whatsoever for any direct or indirect damage (including losses arising from investments), or for the costs or expenses, detrimental legal consequences or other sanctions (including punitive and consequential damage) sustained by any natural or legal person as a result of the purchase or sale of financial instruments or engaging investment services described herein, even if OTP Bank Romania S.A. was warned of the possibility of such occurrences. Figures described herein refer to the past and past performance is not a reliable indicator of future results.

Investments in financial instruments carry a certain degree of risk (fluctuation of share prices, uncertainty of dividend, yields and 1 or profits, exchange rate fluctuations, etc.). The capital invested is not guaranteed, investment gains, usually assumed proportionate to risk, and past performance of financial instruments is not a guarantee for future performance.

Please note that the Internet is not a secure environment and OTP Bank Romania S.A. does not accept any liability for any loss caused by the result of using this report in a form altered or delayed by the willful or accidental interception, corruption or virus infection.
