Eyes on the budget

Macroeconomics: private lending down 4% YoY in June (Page 3-4)

Banking statistics data for June did not bring any surprises. Private lending continued to drop (-3.9% YoY), led by the corporate sector (-5%) which is repaying FX debt without contracting new loans. Also, based on the maturity profile, not only the investment loans are suffering, but the working capital loans are declining as well (-12.5% YoY). The housing sector goes forward with investment decisions as the mortgage loans added 7% YoY. The mortgage RON component nearly tripled due to the FX restrictions but it has still large room to increase: it represents only 14% of the stock. Consumer loans continue to contract (-8.3% YoY). Private deposits added 5.9% YoY, with the corporate sector leading the way (+9.4% YoY). RON deposits remain the favorite ones (+8.5% YoY) due to the higher interest rates but the foreign currency deposits are also making progress (+3% YoY, in euro equivalent).

FX market: fiscal risks on the horizon (Page 5 - 6)

The EUR/RON pair fell back below 4.40 level, after news related to the inclusion of another domestic ISIN in the JP-Morgan Index broke out. The depreciation of euro was broader as leu's peers benefited as well while the euro sank to its yearly low against the dollar. The moment bears more importance due to a change in nuance of Janet Yellen confessing to the US Congress: she stated that the FOMC could hike rates faster than expected (currently in mid year 2015) provided the labour market outpaces Fed's expectations. As the market consensus will fully adopt this view, depreciation pressures are likely to be felt. Aditionally, we continue to reiterate the risks associated with a lax fiscal policy, especially in an electoral year. The dynamics of revenues and expenditures keep deteriorating. In H1 2014, the cash budget deficit stood at 0.5%. The 12M rolling figures point to a budget deficit of 1.9% so far versus the planned 2.2%. However, it does not take into account a significant change in taxes, such as the CAS.

Fixed income markets: new ISIN in JP Morgan Index (Page 7 - 8)

The yield curve dropped lower last week, especially at the long end, where the 5Y and 10Y bond yields shed off 10 and 17 bps respectively. This move took place for maturity horizons not perceived as completely exhausted considering the potential real yield gains. The Treasury sold bonds at still declining yields by 22-25 bps. The market reaction was boosted by the news that JP Morgan included a new domestic ISIN in its emerging market bond index and it also included the Romanian securities in another index GBI-EM Global Diversified Investment Grade Index. 70% of RON outstanding government securities mature between 2014-2017 but in this maturity range, prices have already reached their highs.

Money markets: summer ease (Page 9)

Liquidity conditions are at good levels and no pressure was felt last week, when corporate quarterly payments were due. The high government debt redemptions of July will help liquidity conditions in August as well, especially since the month has been slower from the auctions point of view in the past few years. With inflation rate posing little pressure in Romania and in the region as well, it is possible that the Central Bank will take further steps to ease the monetary policy as money market rates are persistently below the base rate. However the move should be carefully planned as the last quarter promises to be eventful due to domestic and external factors as well.

Government securities: new ISIN in JP Morgan Index

The yield curve dropped lower last week, especially at the long end, where the 5Y and 10Y bond yields shed off 10 and 17 bps respectively. This move took place for maturity horizons not perceived as completely exhausted considering the potential real yield gains. The market reaction was boosted by the news that **JP Morgan added a new domestic ISIN in its emerging market bond index** and it also included the Romanian securities in another index GBI-EM Global Diversified Investment Grade Index. 70% of RON outstanding government securities **mature between 2014-2017 but in this maturity range, prices have already reached their highs.**

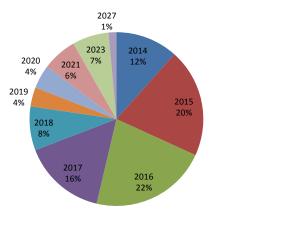

The Treasury sold bonds at still declining yields by 22-25 bps. The 4.3Y and 6.9Y bonds (residual maturity) had an average accepted yield of 3.1% and 3.88%, respectively. Demand was not as impressive as the previous week if we look at bid to cover ratio that stood below 2.

MM: summer ease

Liquidity conditions are at good levels and no pressure was felt last week, when corporate quarterly payments were due. The high government debt redemptions of July will help liquidity conditions in August as well, especially since the month has been slower from the auctions point of view in the past few years. With inflation rate posing little pressure in Romania and in the region as well, it is possible that the Central Bank will take further steps to ease the monetary policy as money market rates are persistently below the base rate. However the move should be carefully planned as the last quarter promises to be eventful due to domestic and external factors as well.
